

Software Engineer (Backend)

Company: FinEdge Technologies

Location: Kathmandu, Nepal

Employment Type: Full-Time

Experience Required: 2–5 Years

About the Company

FinEdge Technologies is a growing fintech company developing secure digital payment and financial management platforms for businesses across South Asia. The company focuses on scalable cloud solutions, API integrations, and modern software engineering practices.

Job Summary

We are looking for a Backend Software Engineer to design, develop, and maintain scalable backend services and APIs. The ideal candidate should have strong problem-solving skills, experience working with databases, and familiarity with cloud-based deployments.

Responsibilities

- Develop and maintain RESTful APIs and backend services
- Design scalable database schemas and optimize queries
- Collaborate with frontend developers and QA engineers
- Write clean, maintainable, and well-documented code
- Participate in code reviews and agile sprint planning
- Monitor application performance and troubleshoot production issues
- Implement authentication and security best practices
- Work with CI/CD pipelines and containerized deployments

Required Skills

- Strong knowledge of Python or Node.js
- Experience with Django, FastAPI, or Express.js
- Understanding of SQL databases such as PostgreSQL or MySQL
- Familiarity with Git and version control workflows
- Basic knowledge of Docker and AWS
- Understanding of REST APIs and JSON data handling

Preferred Qualifications

- Bachelor's degree in Computer Science, Information Technology, or related field
- Experience with Redis or message queue systems
- Knowledge of microservices architecture
- Familiarity with automated testing frameworks

Benefits

- Flexible working hours

- Hybrid work environment
- Health insurance coverage
- Annual performance bonus
- Learning and certification support

Salary Range

NPR 80,000 – 150,000 per month depending on experience and skills.
