

Sample Job Description

IT Field: Junior Software Developer

Job Title	Junior Software Developer
Department	Information Technology / Software Engineering
Location	Austin, Texas / Hybrid
Employment Type	Full-time
Reports To	Software Development Manager

Job Summary

The Junior Software Developer will support the design, development, testing, and maintenance of web-based applications and internal software tools. The role is suitable for an entry-level IT professional who understands programming fundamentals and wants to grow in a real development environment.

Key Responsibilities

- Write clean, readable, and maintainable code under the guidance of senior developers.
- Assist in developing front-end and back-end features for business applications.
- Test, debug, and fix software issues reported by users or QA team members.
- Participate in code reviews and follow team coding standards.
- Work with databases, APIs, and version control systems such as Git.
- Prepare basic technical documentation for assigned tasks and completed features.

Education Requirements

- Bachelor's degree in Computer Science, Information Technology, Software Engineering, or a related field preferred.
- Associate degree, diploma, bootcamp certificate, or strong project portfolio may be considered for entry-level candidates.
- Coursework in programming, database systems, web development, or software engineering is preferred.

Skills Required

- Basic knowledge of HTML, CSS, JavaScript, and at least one programming language such as Python, Java, C#, or JavaScript/Node.js.
- Understanding of databases such as MySQL, PostgreSQL, or MongoDB.
- Familiarity with REST APIs, Git/GitHub, debugging tools, and basic software testing concepts.
- Ability to read technical documentation and learn new tools quickly.
- Good problem-solving, communication, teamwork, and time-management skills.

Experience Requirements

- 0-2 years of experience in software development, web development, internship, academic projects, or freelance IT work.
- Experience building small web applications, CRUD systems, portfolio projects, or API-based applications is preferred.
- Prior exposure to Agile/Scrum, ticketing tools, or collaborative development workflows is a plus but not mandatory.

Preferred Qualifications

- Knowledge of React, Angular, Vue, Django, Flask, Laravel, Express.js, or similar frameworks.
- Basic understanding of cloud platforms such as AWS, Azure, or Google Cloud is an advantage.
- Interest in software quality, secure coding, and continuous learning.

Sample Salary Range

\$55,000 - \$72,000 per year, depending on location, skills, and experience.

Note: This is a sample job description created for academic or demonstration use. Employers may adjust qualifications, responsibilities, and compensation based on company needs.
